

**S7**

**Aircraft  
Painting**

S7 Technics provides turnkey aircraft painting, including modification package development, maintenance support during painting, and production of decals and stencils

# PAINT HANGAR

The hangar is equipped with supply and exhaust ventilation with air filtration, adjustable for each aircraft painting process.

An in-house boiler house provides the required operating air temperature in the hangar. Air humidity is controlled by a humidification unit.

The work uses washing and painting equipment from GRACO; specialists work with HVLP spray guns and PRO XP electrostatic painting systems.

The LAYHER docking system (updated in 2019) is approved for painting of Boeing 737, Airbus A320F, RRJ-95, Embraer 190 and other aircraft types.
